

Automation Test Engineer

We are looking for strong Automation Test Engineer to support key clients in the Chantilly, VA area. The candidate will be joining an exciting and high performing team that focuses on delivering superior business value through use of latest technologies and Agile Methodology. The candidate must show aptitude to solve complex problems and continuously learn new tools as the Business demands. Candidate will enable the team members to continue to support a vibrant Start-up like culture where everyone is focused on being productive while having fun.

Responsibilities

- Work with an agile team to test features and functionality to ensure high quality delivery that conforms to user story acceptance criteria.
- Design and build test automation frameworks for cloud-based services.
- Responsible for testing, troubleshooting and debugging features that are developed.
- Create plans to test features, functionality, or whole products at the code level, including functional tests, performance tests, document test design, test plans, and test results. Ensure that test plans are usable by others. Participate in code and test plan reviews with rest of QA and development team.
- Execute test plans to find defects in product or features of products. Confirm defects and work with product development team to prioritize defects and fix them. Log defects in JIRA for tracking and reporting.

Qualifications

- Bachelor's degree or higher in Computer Science, Engineering or related field, or equivalent, relevant work experience
- 6+ years of software engineering and test automation experience
- 3+ years of experience in testing REST APIs using Automation scripting languages (not using SOAPUI or other tools)
- 2+ years of experience developing Selenium/WebDriver based automation framework
- Experience with DocumentDB (MongoDB, DynamoDB), MockServer or RabbitMQ is required
- Experience in developing automation scripts using Ruby, Python, Java or Node.js or any other programming language with Cucumber
- Experience with MySQL and relational database platforms
- Experience with version control systems including BitBucket and GIT
- Experience with Cucumber and Gherkin is a plus
- Experience with Security Testing Tools is a plus
- Experience with Amazon Web Services and/or other public cloud providers is a plus
- Experience with Agile SCRUM is a plus

Technical Skills

Required:

- Agile development
- Open Source DBMS (MySQL or Postgres)
- Start-up mentality
- Java 7/8
- Automated testing tools
- RESTFUL Web Services knowledge
